

FABRICATION REFERENCE — NOT TO SCALE

Custom Acrylic & Polycarbonate Fabrication Solutions

| — HENIL ENTERPRISE — SINCE 2007

Engineering-focused fabrication of acrylic, polycarbonate and custom industrial components — built around customer drawings, dimensions and application requirements.

Built on Experience. Driven by Precision.

ABOUT US

Henil Enterprise is an Ahmedabad-based manufacturer and fabricator of acrylic and polycarbonate components, working with industrial customers since 2007. The company fabricates components to customer-specific drawings, dimensions and application requirements — rather than producing generic, off-the-shelf plastic goods.

Work is carried out using cutting, machining, bending, forming and bonding processes suited to acrylic, polycarbonate and related plastic materials, supporting both one-off custom components and quantity production runs where required.

Customers span pharmaceutical, chemical, engineering and general manufacturing environments that need transparent or fabricated plastic components built to a specification — not a catalogue.

2007

Year the workshop was established in Ahmedabad

Vatva GIDC

Based in Ahmedabad's established industrial estate

Custom

Components built to drawing, not off a shelf

TIMELINE

2007

Henil Enterprise established in Ahmedabad, taking up acrylic fabrication work.

Growth

Capabilities expanded to include polycarbonate fabrication and custom industrial components.

Present

Serving industrial customers with custom-fabricated acrylic and polycarbonate solutions.

Fabrication, not off-the-shelf supply

Every component starts from a customer requirement, drawing or sample — not a fixed catalogue.

Multiple processes under one roof

Cutting, machining, forming and bonding are carried out in-house through to the finished part.

Built for industrial use

Components are developed with the working environment and application of the customer in mind.

Our Expertise

Six core processes carry a component from a customer requirement to a finished, fabricated part.

CNC Routing

Precision cutting and machining of acrylic, polycarbonate and suitable plastic materials according to customer requirements.

Laser Cutting

Accurate cutting of suitable acrylic and plastic components with clean, consistent edge quality.

Acrylic Bending

Custom bending and forming of sheet material for fabricated components and assemblies.

Thermoforming

Forming plastic sheet into customer-specific shapes and three-dimensional components.

Bonding

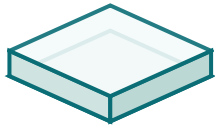

Professional acrylic and plastic bonding to join fabricated parts into finished assemblies.

Precision Fabrication

Custom-built components manufactured to drawings, dimensions and application requirements.

Materials We Work With

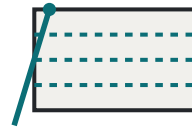

Acrylic

A versatile sheet material used across transparent, fabricated and industrial components, valued for clarity and workability. Henil Enterprise fabricates with:

- Cast Acrylic
- Extruded Acrylic

Grade and thickness are selected per application and confirmed with the customer at the enquiry stage.

Polycarbonate

Suited to applications that call for high impact resistance alongside a durable, transparent or protective component — commonly used for machine guarding and protective panels.

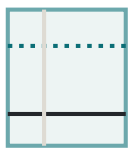

Where exact technical specifications are required, these are confirmed against the customer's drawing and application.

Material selection is made together with the customer, based on the drawing, the application environment and the finish required — rather than a single default sheet.

Industrial Acrylic Components

Fabricated acrylic parts built to customer dimensions for tanks, assemblies and functional industrial components.

TANK

Acrylic Tanks

Fabricated transparent tanks for process, storage or display use within an industrial setting.

Customization: size, wall thickness and fittings per drawing.

ASSEMBLY

Acrylic Fabricated Assemblies

Multi-part acrylic assemblies bonded and fabricated to function as a single finished unit.

Customization: configuration and fittings per application.

CUSTOM PART

Custom Acrylic Components

Individual parts machined and finished to a customer's own geometry and functional requirement.

Customization: shape, finish and mounting per drawing.

INDUSTRIAL PART

Industrial Acrylic Parts

General industrial acrylic parts fabricated for equipment, fixtures and internal use cases.

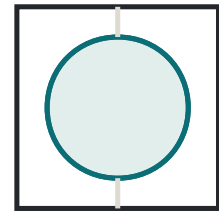

Customization: quantity and specification per order.

Dimensions shown are for illustration only and are confirmed against the customer's drawing at enquiry stage.

Process & Inspection Components

Transparent fabricated components that let operators see into a process or piece of equipment without opening it up. Typical uses include:

- **Visual inspection** — checking material, level or condition without contact.
- **Process visibility** — following a process step as it happens inside equipment.
- **Equipment monitoring** — ongoing observation of machine or vessel condition.
- **Protective viewing** — a viewing point that also shields the operator.

Sight Glass

ALSO FABRICATED

- Inspection Windows
- Transparent Covers
- Custom Viewing Components

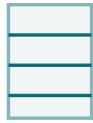

These components are typically fitted into an existing vessel, panel or machine housing, so mounting details, thickness and finish are confirmed against the customer's own equipment drawing rather than a fixed standard size.

Fabricated Structures

Acrylic boxes, cabinets, enclosures and covers, fabricated to the customer's drawing rather than supplied as a fixed, one-size-fits-all product.

Acrylic Boxes

Acrylic Cabinets

Enclosures

Covers

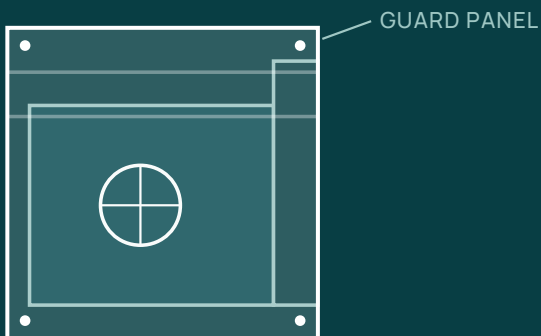

Custom fabrication, not one-size-fits-all

Every enclosure, box or cover is built to the customer's own drawing, dimensions and application requirement, rather than supplied as a standard, fixed-size product.

Polycarbonate & Machine Protection

Transparent guarding and protective panels fabricated in polycarbonate for use directly around industrial machinery.

Polycarbonate Guards

Fitted around moving parts to keep the working area enclosed while remaining visible.

Machine Protection Covers

Custom covers fabricated to fit the exact footprint of the equipment.

Protective Panels

Standalone panels used to section off or shield a work area.

Custom Polycarbonate Components

Additional components fabricated to the specific safety or protection requirement.

Guards and panels are fabricated to the customer's requirement. Formal safety certification, where required, is confirmed separately and is not implied by this brochure.

Solutions Across Industrial Applications

From process visibility to machine protection and custom fabricated components, Henil Enterprise develops solutions around the requirements of industrial customers.

Pharmaceutical

Chemical

Engineering

Manufacturing

Food Processing

Packaging

Machinery

Machine
Manufacturing

Industrial Equipment

One workshop, several industries

The same core processes — cutting, forming, bonding and fabrication — are applied differently depending on the customer's industry and application.

Reviewed on application, not assumed

Where an industry has specific hygiene, chemical-resistance or safety expectations, these are discussed with the customer at the enquiry stage.

From Drawing to Finished Component

A consistent path from customer requirement through to a finished, inspected component.

01

Requirement

Customer requirement, dimensions or drawing is shared and reviewed.

02

Material Selection

Acrylic, polycarbonate or another suitable material is selected for the application.

03

Cutting & Machining

CNC routing, laser cutting or another appropriate process shapes the component.

04

Forming

Bending or thermoforming is applied where the geometry requires it.

05

Bonding & Assembly

Individual parts are bonded and fabricated into the finished assembly.

06

Inspection

Dimensional and visual checks are carried out against the requirement.

07

Finished Component

The completed component is ready for the customer's application.

Formal quality certifications are not implied by this process outline; dimensional and visual checks are carried out in line with the customer's own requirement for the order.

Why Henil Enterprise

Established Experience

Operating as an acrylic and polycarbonate fabricator since 2007.

Custom Fabrication

Solutions developed around the customer's own requirement, not a fixed catalogue.

Multiple Manufacturing Processes

CNC routing, laser cutting, bending, thermoforming, bonding and fabrication in-house.

Industrial Focus

Components designed around practical, real-world industrial applications.

Quantity Requirements

Capability to support quantity orders where the application calls for it.

Customer-Specific Manufacturing

Products developed according to drawings, dimensions and application needs.

Henil Enterprise works as a fabrication partner rather than a stock supplier — every enquiry is reviewed on its own drawing, dimensions and application before a solution is proposed.
